

We will soon be opening the Center for **Linguistic Research Infrastructure** (LiRI) at the University of Zurich. LiRI involves researchers and research teams studying language from a wide range of perspectives. The Center provides support for language scientists with different backgrounds working with experimental (e.g. eye-tracking, EEG, behavioral) and natural linguistic data (audiovisual, textual and speech data).

We are looking for a dedicated

System Administrator / Scientific Programmer (100% FTE)

to extent our team starting on 1 April 2020. The appointment is initially limited until December 2022, with a possibility of extension for an indefinite period of time subject to performance and budgetary developments.

Responsibilities

- User account management
- System and tool installation (in particular linguistic analysis and annotation tools)
- Data storage and back-up
- Routine language data crawling and cleaning and format conversion
- Adaptation and application of linguistic annotation tools

Qualifications

- University degree in Computer Science, Language Technology or related field
- Familiarity with Unix operating systems
- Proficiency in Python (more programming languages are an asset)
- Experience in programming in research contexts
- Experience with modern natural language processing
- Fluency in German is an asset.

Why us

We offer a dynamic work environment with friendly colleagues in direct contact with many IT experts and interdisciplinary research groups. You will have an exciting opportunity to be an integral part of a novel research environment. You will be compensated according to the high living standards of Zurich.

How to apply

Please send your full application (CV, diplomas, references) by email to jobs@linguistik.uzh.ch. The interviews will take place in **February / March 2020**.
